

Underwater Equipment Skills

An introductory course designed to provide the practical skills required to recognise, operate and maintain various types of underwater equipment, safely and efficiently

Representative equipment is provided to hone practical skills including battery replacement, o-ring replacement and underwater electrical connector care.

The one-day course is classroom based and can be presented at the client's premises. Alternatively, the course can be offered at our comfortable classroom and workshop facilities near Thurso

The course can be tailored to meet employers' requirements with details of specific items of survey, scientific or remote sensing equipment included as required.

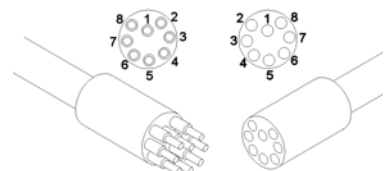

Course Topics Include:

Equipment Mobilisation
Sensor Configuration
Serial Communication
Fault finding

Splicing & Cable Re-termination
Underwater Connectors
Types of underwater cable

Winches & Slip-rings
Underwater Enclosures & O-rings
